Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments are considered and acknowledged but they are not persuasive. The previous Office Action still applied because the prior art would meet the applicant's claims in their broadest interpretation. For example the Applicants argue "Spitz does not identically disclose (or even suggest) the feature that the phase terminal is structurally configured identically to one of the positive terminal or the negative terminal" and further "Spitz does not identically disclose (or even suggest) the feature of the phase terminal being situated rotated by 180 about the longitudinal axis of the terminal lug in relation to an orientation of one of the structurally identically configured positive terminal or the structurally identically configured negative terminal." Spitz does teach above limitations. Spitz discloses the phase terminal is structurally configured identically to one of the positive terminal or the negative terminal; stacking the positive terminal 20, Fig. 2, negative terminal 20, the phase terminal 18,19, the first semiconductor chip 15, and the second semiconductor chip 15 on top of one another in a joining device, the phase terminal (as located) 18, 19, Fig. 7, being situated rotated by 180 about the longitudinal axis of the terminal lug in relation to an orientation of one of the structurally identically configured positive terminal or the structurally identically configured negative terminal 38, Fig. 7; and encapsulating the stack in an injection molded housing 37 and (column 7, lines 37-43).
